

REWRITING THE WEB OF COMPLIANCE INTO WEALTH OF BUSINESS OPPORTUNITIES

Vardaan's Made-in-India, globally-ready GRC platform that transforms compliance from cost centre to competitive advantage.

THE COMPLIANCE CONUNDRUM

Compliance has traditionally been framed as a tangle, a web of rules, controls, audits and checklists that drains time, talent and capital. But what if that web could be rewired into a network of insights, revenue levers and competitive advantage?

The problem: compliance as a tangled cost center

Most organizations experience the same pattern:

- Multiple frameworks (local regulators, international standards, industry codes) overlap and contradict.
- Data is siloed across IT, legal, operations and finance, no single truth.
- Compliance work is episodic: intense before audits, lax after.
- Remediation is manual, slow and expensive.
- Worst of all, compliance activity rarely creates business value, it is a box to tick, not a lens to see opportunity.

THE RiskaVaire REVOLUTION

RiskaVaire flips that paradigm. It treats compliance as structured, machine-readable capital, a set of signals that, when integrated with data and analytics, become strategic assets. Instead of hiding in the back office, compliance becomes visible, actionable and monetizable.

CORE CAPABILITIES THAT MATTER

RiskaVaire's comprehensive platform delivers eight mission-critical capabilities that transform how organisations approach governance, risk and compliance.

Regulatory Intelligence Engine

Continuously ingests rules, circulars and guidance across jurisdictions, auto-mapping obligations to controls and owners with machine precision.

Multi-Framework Mapping & Policy Layer

Continuously ingests rules, circulars and guidance across jurisdictions, auto-mapping obligations to controls and owners with machine precision.

Control Automation & Evidence Capture

One platform to manage ISO, local regulators, sectoral codes, ESG frameworks and client-specific SLAs, with configurable rule-sets.

Risk & Opportunity Analytics

Machine-assisted analytics surface not just risks but high-value opportunities, e.g., where compliant operations enable faster market entry or premium pricing.

ADVANCED PLATFORM FEATURES

● Third-Party Governance

Continuous monitoring of vendors and components to avoid supply-chain surprises and regulatory contagion.

● Executive Dashboards

Board and regulator dashboards with executive-grade KPIs that translate controls into confidence for investors.

● API-First Integration

Continuous monitoring of vendors and components to avoid supply-chain surprises and regulatory contagion.

● ESG Workflows

Embedded sustainability workflows from disclosure to impact metrics, converting ESG compliance into investor-facing performance.

FROM WEB TO WEALTH

RiskaVaire converts compliance obligations into tangible business value through ten proven pathways that drive revenue, reduce costs, and create competitive advantages.

Lower Operating Costs

Automated control checks reduce manual overhead and consulting spend

Penalty Avoidance

Proactive remediation preserves capital and reputation

Better Funding Economics

Transparent governance leads to stronger credit terms and lower capital costs

New Revenue Streams

Package compliance as a service and monetise platform insights

Faster Market Access

Automated regulatory mapping cuts approval cycles for new products and geographies

ADDITIONAL VALUE CREATION OPPORTUNITIES

01

Product Differentiation

Use compliance-ready features as customer assurances with 'regulated-ready' integrations for enterprise buyers seeking reliability.

02

Insurance Benefits

Demonstrable controls and monitoring lower premiums and improve insurability across risk categories.

03

ESG Monetisation

Solid sustainability disclosures unlock ESG funds and preferential procurement opportunities.

04

Frictionless Partnerships

Rapid third-party onboarding with continuous monitoring reduces time-to-contract and supplier risk.

05

Data-Driven Strategy

Compliance telemetry feeds R&D, pricing and market strategy, turning regulatory signals into product insight.

PRACTICAL ADOPTION ROADMAP

A PROVEN 12-MONTH JOURNEY FROM COMPLIANCE BURDEN TO BUSINESS ADVANTAGE

PHASE 1 • MONTHS 1-3

Foundation & Assessment

- ✓ Current state assessment and gap analysis
- ✓ Stakeholder alignment and change readiness
- ✓ Platform configuration and initial setup
- ✓ Core team training and certification

PHASE 2 • MONTHS 4-6

Core Implementation

- ✓ Priority use case deployment
- ✓ Integration with existing systems
- ✓ Automated workflow configuration
- ✓ User onboarding and adoption

PHASE 3 • MONTHS 7-9

Expansion & Optimization

- ✓ Advanced features rollout
- ✓ Cross-functional process integration
- ✓ Performance optimization and tuning
- ✓ User onboarding and adoption

PHASE 4 • MONTHS 10-12

Value Realization

- ✓ Full organizational adoption
- ✓ ROI measurement and validation
- ✓ Continuous improvement initiatives
- ✓ Strategic expansion planning

MEASURABLE OUTCOMES TO EXPECT

QUALITATIVE & QUANTITATIVE SIGNALS

Audit-readiness

From weeks to days for evidence assembly

Remediation velocity

Faster root cause identification and closure

Fewer regulatory escalations

Improved inspections and regulator engagement

Commercial wins

Faster RFP responses, improved partner confidence, and lower bid friction

Strategic intelligence

Consolidated compliance data informs M&A due diligence and underwriting

WHY 'MADE IN INDIA' MATTERS FOR GLOBAL COMPLIANCE

Global Standards, Local Understanding

Built for international compliance frameworks while understanding the nuances of Indian business culture and regulatory environment.

Innovation at Scale

Deep understanding of relationship-based business practices and hierarchical decision-making processes.

Cultural Alignment

Built for international compliance frameworks while understanding the nuances of Indian business culture and regulatory environment.

Quality Excellence

Built with the same engineering excellence that powers the world's largest technology companies.
